SAFEGUARD

Generationally advanced AI security.

Shadow AI discovery, prompt and data DLP, allow/block/coach, hardening, and AI-powered detection: one program, for your clients.

THE PROBLEM

Your clients are already in ChatGPT and Copilot, but:

01 Nobody can say which models hold their data

02 A blocked ChatGPT is not a program

03 Another point tool means another console and COGS line

THE SOLUTION

Safeguard is the program you walk in with.

We are the engine behind your AI-security program, with the included SOC behind that.

What we handle

- Shadow AI discovery and usage reporting
- Prompt and data DLP; allow, block, coach
- Posture hardening and control mapping
- AI-powered detection, SOC, and free IR

What makes this different

01 One program on one plane, no fifth console

02 30-minute first response SLA

03 Left of the prompt, right of the leak: one partner

04 SOC included. IR free. No surprise invoice.

30 minutes

THE COMMITMENT

First response SLA

Outcome

- Telemetry, not a policy PDF
- You stay the trusted advisor
- Faster response times
- AI security attached as standard, not discounted

NEXT COHORT

See how Safeguard fits your book

Cohorts are filling. We are taking names now for the next available window. We take our time with onboarding to get it right. Support is white-glove. We will not contact your clients.
